

## “YOUR LIFE IN FOCUS” WARRANTY

Beginning in 2011, The Eye Institute of Utah offers all of our laser vision correction patients this lifetime warranty program. In the event your vision decreases from the intended result due to myopia, hyperopia or astigmatism, The Eye Institute of Utah will enhance the original laser vision correction at no charge, subject to the eligibility and exclusions specified below.

We can provide you this warranty because we are confident that our surgeons can provide the best results possible. We call this “Your Life in Focus” Warranty Program. The primary benefit of this program is that if an enhancement is deemed beneficial and medically advisable, eligible patients will have no charge for the enhancement procedure. Charges for clinical examination, special testing and procedures, and medications will be the patient’s responsibility. A 90 day postoperative period is included with the enhancement.

### ELIGIBILITY CRITERIA:

- Your initial refractive eye procedure must have been either LASIK with Intralase or PRK and must have been performed at The Eye Institute of Utah.
- Vision must have been correctable to 20/20 before the initial procedure.
- Vision must be correctable to 20/20 at the time of enhancement.
- At the time of enhancement, your uncorrected vision must be 20/40 or worse and you must have at least 0.75D of myopia, hyperopia, or astigmatism.
- You must have sufficient corneal thickness to allow safe treatment.
- You must have complied with the post-operative treatment regimen, including all follow-up visits, as prescribed by your Eye Institute doctor during the first twelve months after the initial procedure.
- You must be current in all payments due for laser vision correction.
- You must provide proof of having had an eye exam each year following the initial procedure. Costs of annual exams are the responsibility of the patient.

### EXCLUSIONS:

Although we expect many patients to be eligible for this program, there are exceptions or conditions under which further refractive procedures are not advised. These patients, as described below, will not be eligible for the “Your Life in Focus” Warranty program.

- Patient’s vision decrease is due to trauma or any progressive eye disease such as cataract, glaucoma, diabetes or presbyopia.
- Patients who are found to be poor candidates for any other reason such as active autoimmune or collagen vascular disorders, thin cornea, keratoconus, corneal ectasia, or irregular astigmatism.
- Patients for whom Lasik or PRK was performed subsequent to any prior ocular surgery such as, but not limited to, cataract surgery or corneal transplant procedures.

This program does not guarantee a lack of complications or 20/40 or better vision the rest of the patient's life.

I, \_\_\_\_\_, have reviewed the above eligibility criteria and exclusions for the “Your Life In Focus” Warranty with The Eye Institute of Utah. I understand that if I fall outside of these parameters, I will not be eligible for this program. Fees associated with enhancements performed outside of this program will be the responsibility of the patient.
